DETAILED ACTION

Election/Restrictions

1) Applicant's election with traverse of invention I, drawn on claims 1-37, in Paper

No. 3, is acknowledged. The traversal is on the ground(s) that the non-elected claims

38-47, of invention II, are believed to be examinable together with claims 1-37. This is

not found persuasive because while applicants argue that the method and claimed

apparatus can be practiced together, the Examiner notes that the claimed apparatus

can be used for practicing another and materially different process, for example,

shaping of plastic pipe fittings.

The requirement is still deemed proper and is therefore made FINAL.

Drawings

2) This application has been filed with informal drawings, which are acceptable for

examination purposes only. Formal drawings will be required when the application is

allowed.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4) Claims 1-11, 29, are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "the cylindrical tube" in line 3; the limitation "the tube" in lines 7 and 8. Claim 5 recites the limitation "the terminations" in line 1. There are insufficient antecedent basis for these limitations in the claims.

Claim 8 is not clear. The specification discloses that the second diameter d_2 is greater than the first diameter d_1 .

Claim 29 is not clear; should the claim perhaps be based on either claim 27 or claim 28.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C: 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5) Claims 1-7, 13-19, 23-25, 27-37, are rejected under 35 U.S.C. 103(a) as being unpatentable over Wilson (677,161) in view of Prost (4,846,746).

Art Unit: 1731

Claims 1, 13, 15, 19, 27, 29, 35: Wilson discloses a mold having two complementary elongated side pieces (F and G), and an end cap (R) with a cylindrical stub for insertion within the opening of a tube at one end, for the purpose of tapering and shaping selected sections of a glass cylindrical tube (Wilson, cols. 2-3, and Figure 3). The claim also recites the limitation of having heating source within a one piece of the mold. Prost discloses a multi piece mold where glass is heated from a heated source within the mold until the glass is rendered malleable to be pressed into a desired shape (Prost, col. 2, lines 10-37, and Figures 1-4). It would have been obvious to combine the teachings of Prost and Wilson, because such a combination would provide an improved means of heating the glass tube in the Wilson design.

Claims 2-7, 14, 16-18, 23-25, 28, 30-32, 34, 36-37: Prost discloses the heating system which includes heat generator 19, which creates a flame 20, burner 19, along heating axis 21, ventilation channels, operable temperatures and sensors (Prost, col. 3, line 49 to col. 6, line 15, and Figures 3-4).

8) Claims 8-12, 20-22, 26, are rejected under 35 U.S.C. 103(a) as being unpatentable over Wilson in view of Prost, and further in view of Sherrerd (1,591,060). Wilson and Prost do not teach the second section of the cylindrical stub extending from the first section beyond the first distance; forming a ledge on the inner diameter of the exhaust tube. Sherrerd discloses that it is well known in the pipe fitting art to use a cylindrical end piece having a first section with a second section extending from the first section for the purpose of creating a ledge within the pipe (Sherrerd, Figure 5, items 1, 2, 6). Sherrerd additionally discloses forming a ledge on the piping Figure 5, items 1, 2,

6, 7). It would have been obvious to combine the teachings of Sherrerd and Wilson because such a combination would provide for better piping coupling capacity.

Conclusion

9) Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark Halpern whose telephone number is 703-305-4522. The examiner can normally be reached on Mon-Fri, (9:00-6:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stanley Silverman can be reached on 703-308-3837. The fax phone numbers for the organization where this application or proceeding is assigned are 703-308-7718 for regular communications and 703-305-3599 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0651.
